# INSTALLATION

  
**IMPORTANT**

Please carefully check the product for any appearance or functional defects before you start installation

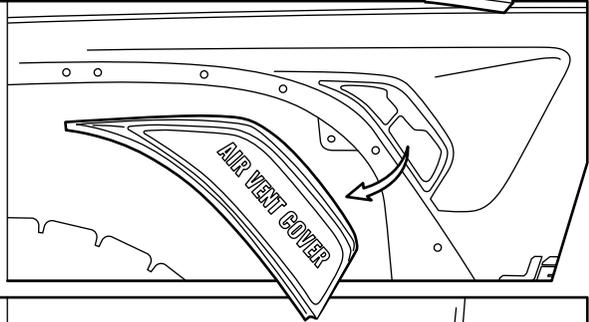

## **STEP 1**

First, you need to remove the fender from your vehicle by releasing the bolts/fasteners inside the wheel well as shown in Figure 1.

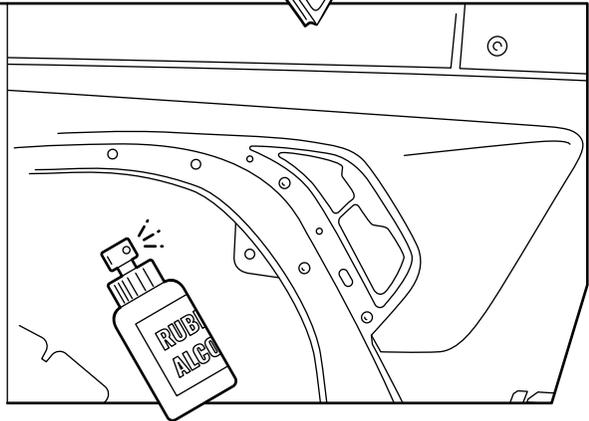

## **STEP 2**

Use plastic removal tool to pry off the air vent cover as shown in Figure 2.

## **STEP 3**

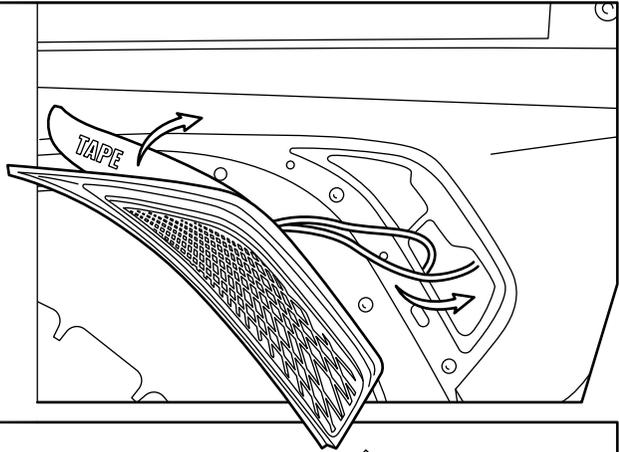

Please thoroughly clean the painted surface around the air vent with isopropyl alcohol ( rubbing alcohol ) to remove dust or residue that may inhibit tape bonding as shown in Figure 3.

## STEP 4

Tear off the 3M tape on the back of the side marker lights and route the electrical harness through the upper channel.

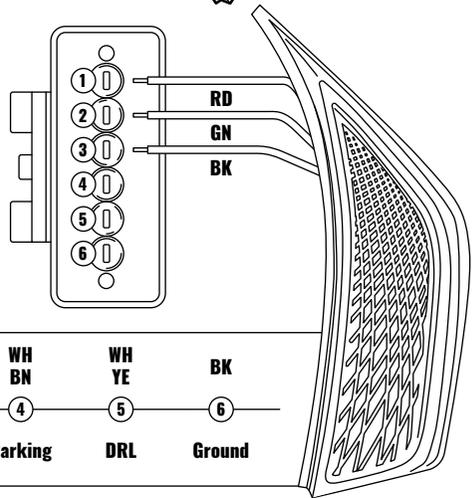

Next, simply snap it in and press gently to make sure it's firmly in place as shown in Figure 4.

## STEP 5

Now, please connect the electronic wiring harness of the side marker lights to the factory wiring harness separately (Refer to wiring diagram below).

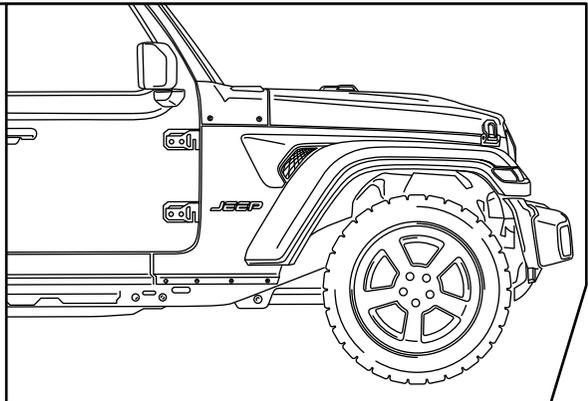

Then, Power-ON to test and make sure all signal functions are working properly.

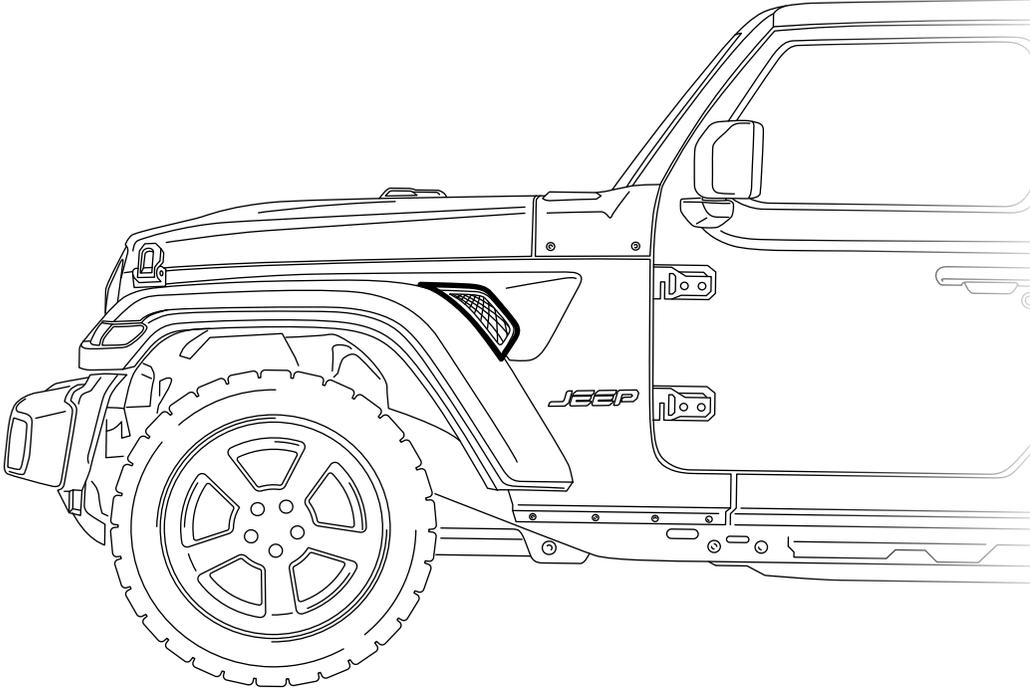

WIRE COLOR	BG BN	WH GN	BK	WH BN	WH YE	BK
	①	②	③	④	⑤	⑥
Function	Side Marker	Turn	Ground	Parking	DRL	Ground

## STEP 6

Let's repeat the same steps on the Passenger Side.
